(54) Title: DEVICE FOR CONTROLLING ELECTRONIC APPARATUSES

(57) Abstract: The invention relates to a central control unit (4) for a series of electronic apparatuses such as, for example, a CD player (1), a video recorder (2) or a satellite receiver (3). The electronic apparatuses are connected via a SCART cable to connections (5) of the central control unit (4). The central control unit (4) further comprises interfaces (6a, 6b) to mobile control apparatuses such as a PDA (8) or a PC (7), in which further external control apparatuses such as, for example, a mobile phone (9) can be connected via a network (12). The central control unit (4) translates protocols used for the connections (5) and the interfaces (6a, 6b) and thus provides the possibility of a flexible control of the electronic apparatuses (1, 2, 3).
